PROFESSIONAL SUMMARY

Full Stack Developer with 2 years of experience delivering projects in React, Next.js, TypeScript and Node.js for real clients across industrial, educational and commercial sectors. Part of UXnicorp, a three-person development team, where I handle the full project cycle: requirements gathering, interface design, frontend and backend development, and direct client communication. I'm looking to join a development team full-time; UXnicorp will continue as a parallel project. Advanced Computer Engineering student at UNCA. Remote work with immediate availability.

TECHNICAL STACK

- **Frontend:** React, Next.js, Astro, Vite, TypeScript, JavaScript (Vanilla), React Router, TanStack Query
- **Styling:** Tailwind CSS, CSS Modules, vanilla CSS
- **Backend:** Node.js, Express, REST APIs
- **Databases:** PostgreSQL, MongoDB
- **ORMs:** Prisma, Drizzle
- **Auth:** JWT (httpOnly cookies), rate limiting
- **Animation:** Framer Motion / Motion, GSAP, Lenis
- **Tools:** Git, Vercel, Playwright, Cypress, Postman, Sharp, Resend, Cloudinary, MercadoPago SDK

EXPERIENCE

Full Stack Developer — UXnicorp

2024 — Present | Catamarca, Argentina (remote)

Development team made up of 3 programmers, currently in the process of formalizing as a company. I take part in every stage of the project, both individually and in direct collaboration with my teammates:

- **Team collaboration:** We pair up or rotate depending on the project, splitting modules between the three of us and then integrating the work together. We use a Git workflow with branches and cross-reviews, somewhere between formal and informal.
- **Frontend and backend development:** React, Next.js, Astro, TypeScript, Node.js, Express, PostgreSQL, MongoDB. From editorial landing pages to full-stack systems with authentication, databases and payment gateways.
- **Technical decisions:** I choose stacks and define architectures and methodologies for each project based on the real problem, not on trends.
- **Interface design:** I define palettes, typography and visual hierarchy, and lay out full interfaces before writing code.
- **Client communication:** I gather requirements, explain technical decisions without jargon, and manage expectations around timelines and scope.
- **Project management and informal leadership:** Without holding the title, I'm usually the one who sets priorities, helps organize team management, and unblocks decisions when things need to move forward.
- **Client outreach:** I identify businesses that would benefit from what we do, reach out to them and present proposals.

5 real clients with measurable results.

DELIVERED PROJECTS

PATAgenda — Teacher disciplinary case tracker — May 2026

Client: Ministry of Education teacher | React, Vite, TanStack Query, Express, Prisma ORM, PostgreSQL, JWT httpOnly

Impact: Went from paper and Excel with no traceability to a web system with zero missed legal deadlines.

Digitized a manual process previously tracked on paper and Excel. Models legal concepts from the Ministry of Education: ordinary and summary disciplinary cases, mediations, dismissals, each with specific deadlines. Eliminated missed statutory deadlines. Accessible from desktop and mobile with secure authentication.

ElectroPower — Industrial digital presence — November 2025

Client: Industrial electrical services company | React, Vite, React Router, GSAP, vanilla CSS

Impact: Went from no digital presence to a site with local search ranking and a direct WhatsApp contact flow.

The company's first website, moving from no online presence to ranking in local searches. WhatsApp integration as the main contact channel: clients arrive in chat with context about the product they saw.

Jimena Vilte Nail Artist — Editorial landing page — May 2026

Client: Personal nail art brand | Next.js, React, TypeScript, Tailwind CSS, Framer Motion, Lenis

Impact: Went from competing only on Instagram among hundreds of identical accounts to an editorial landing page that let her raise her rates.

Minimalist editorial landing that set the brand apart from Instagram's visual saturation. Sober palette (charcoal, off-white, beige). Allowed the client to raise her rates and attract clients who value quality over price.

Instituto ISDEP — Educational platform — December 2025 — Present

Client: Graphology and forensic sciences institute | React, Vite, React Router, Framer Motion, SwiperJS, Cloudinary, Resend

Impact: Went from no digital presence to an online catalog of 17 courses with SEO ranking in its niche.

Multi-page platform with a 17-course catalog, detailed program pages, faculty section and inquiry form. Structural SEO with per-page meta tags and JSON-LD. Positioned the institute for graphology program searches in Argentina, a niche with little digital competition. Ongoing maintenance.

Comercial Río Hondo — Quarry website — February 2026

Client: Santiago del Estero construction aggregates quarry | React, Vite, vanilla CSS, WhatsApp

Impact: Went from no online presence to its first website, with a product catalog and local search ranking.

The company's first digital presence. Landing page with a product catalog, real photos and videos of the quarry in operation, and a contact form that routes to WhatsApp. Achieved local SEO for the industry in Santiago del Estero.

PERSONAL PROJECTS

Zabira Studio — Management system for a premium pilates studio (2026)

React, Vite, Node.js, Express, MongoDB, MercadoPago SDK, JWT, vanilla CSS

A public brand landing page kept separate from an internal dashboard with role-based access (Clients, Instructors, Admins, Superadmin). Atomic booking engine built with MongoDB atomic operations (\$expr, findOneAndUpdate, embedded subdocuments) to solve concurrency without locks or complex transactions. Membership integration via MercadoPago webhooks and JWT authentication with securely stored tokens. Originally a project for a real client who couldn't continue due to budget; I turned it into a fully polished conceptual demo.

Content Studio — Template engine for content production (2026)

React, TypeScript, Express, Drizzle ORM, libSQL, Monaco Editor, html-to-image, JSZip, Zustand

Internal UXnicorp tool for creating and exporting social media carousels and images without leaving the client. Typed template system (variables, types, validations) that generates the edit form dynamically. Isolated iframe rendering (srcdoc sandboxing) to guarantee fidelity between preview and export. Fully client-side export with html-to-image, canvas and JSZip, no rendering servers.

MyVisor — Markdown reader (2026)

Vanilla JS, Vite, File System Access API, marked, DOMPurify

Markdown reader with no backend and no accounts: opens local folders straight from the browser, or a public library of its own. Built entirely around the ergonomics of prolonged reading.

UXnicorp Academy — Web development course (2025)

Astro (Islands Architecture), React, Tailwind CSS, MDX

Zero-JS educational platform built to onboard developers. Instant loading, with interactive components isolated only where they add value, demonstrating through its own architecture the performance principles it teaches.

UXnicorp's own website (2026)

Next.js, React, TypeScript, Tailwind CSS, Framer Motion, Lenis

The agency's own site, featuring a custom interactive tool (UX Score) that diagnoses a visitor's website and works as a lead magnet. Fully transparent pricing acts as a natural lead filter.

EDUCATION

Computer Engineering — Universidad Nacional de Catamarca (UNCA)

2018 — Present (3rd year in progress)

Complementary self-taught training: React, Next.js, TypeScript, Node.js, Express, PostgreSQL, MongoDB, Tailwind CSS, Astro, and manual and automated testing (QA) with Cypress and Postman. Learned through real projects and technical documentation. No formal courses or external certifications.

COMPETENCIES

Technical

- End-to-end full-stack development (frontend, backend, database, deploy)
- Architecture and stack decision-making: I choose technologies based on the problem, not trends
- Domain modeling: translating complex business requirements into data structures and user flows
- Concurrent systems design: solving race conditions (e.g. in booking systems) with atomic database operations, no queues or locks required
- Payment integration: webhooks and SDKs for payment gateways (MercadoPago) to automate membership activation and access control
- Technical SEO: dynamic meta tags, JSON-LD, structured data, prerendering, Core Web Vitals
- Web performance: code splitting, lazy loading, image optimization, self-hosted fonts
- Accessibility: WCAG AA contrast, keyboard navigation, aria labels, reduced motion
- Internationalization (i18n): bilingual Spanish-English portfolio with a translation system
- Working knowledge of testing & QA (manual and automated with Cypress, test case design, exploratory testing, API testing with Postman), self-taught and in the process of applying it to client projects

Soft Skills

- **Negotiating scope and expectations:** When a client asks for more than what was originally agreed, I renegotiate price or scope before simply accepting it, so the project stays profitable and both sides' expectations stay aligned.
- **Technical tradeoffs with a focus on cost:** When a request adds technical complexity, I evaluate simpler alternatives that meet the same goal without inflating the client's budget (for example, a serverless function instead of a full backend, or reusing existing storage instead of standing up a proprietary database).
- **Delivering under pressure and tight deadlines:** I can build and ship complete features on short timelines when a project demands it, without sacrificing security or code quality.
- **Independent self-learning:** What I don't know, I research and learn. I don't wait for someone to explain it to me: I read documentation, experiment, and get done whatever needs to get done.
- **Communicating with non-technical people:** I explain architecture and stack decisions in plain language, with no jargon.
- **Project ownership:** I don't just write code. I care that the project works and that the result makes sense for the client's business.

LANGUAGES

Spanish — Native | English — Upper-intermediate (fluent technical reading, bilingual portfolio and articles)

TESTIMONIALS

"Gonzalo built me a website that communicates exactly what I wanted. My clients come in and immediately understand what my work is about. It sets me apart from all the Instagram accounts doing the same thing."

— *Jimena Vilte, Nail Artist*

"Thank you very much for the website, I'm very satisfied with your work, very professional."

— *Comercial Río Hondo, Quarry · Aggregates · Construction*
